

Oracle ESS Monitoring

ESS Job Monitoring Without the Pain

Stop logging into Oracle to check if your scheduled processes finished. There's a better way.

The daily ESS job monitoring routine

Log into Oracle, navigate to Scheduled Processes

Every. Single. Time. Just to see if a job ran. Filter by date, scroll through results, hope you find it.

No real-time alerts

A critical job failed at 2 AM. Nobody knew until someone manually checked at 9 AM.

No execution history or trends

Was this job always slow, or did something change? Oracle doesn't make it easy to compare runs.

Multiple people, zero coordination

Three people submit overlapping jobs. Nobody knows who submitted what or when it'll finish.

What finance teams actually need

It's not complicated. It just doesn't exist natively in Oracle.

- One dashboard showing all ESS jobs across all modules
- Real-time status without logging into Oracle
- Alerts when something fails — not silence
- History to compare current runs with past performance
- The ability to submit, cancel, and retry from one screen

What ERPUX ESS Monitor does

Purpose-built for Oracle Fusion Cloud scheduled processes

Submit jobs

Launch ESS jobs with pre-configured parameters. One click, no Oracle navigation.

Track in real time

Live status updates. See running, completed, warning, and failed jobs at a glance.

Auto-retry on failure

Configure retry rules for known transient failures. No manual intervention needed.

Smart alerts

Get notified on failure, long-running jobs, or unusual patterns. Email and webhook support.

Execution history

Compare run times, spot trends, identify jobs that are degrading over time.

Cancel from dashboard

Cancel running or queued jobs without navigating to Oracle. Full control from one screen.

54 pre-configured jobs across 12 Oracle modules

Monitoring with alerts

Before vs After

Without ESS Monitor

- x Log into Oracle to check status
- x Failures discovered hours later
- x Manual resubmission
- x No execution history
- x Each module checked separately
- x No team visibility

With ESS Monitor

- ✓ Live dashboard, always current
- ✓ Instant failure alerts
- ✓ Auto-retry on known failures
- ✓ Full history and trends
- ✓ All modules in one view
- ✓ Shared team dashboard

Works across all Oracle modules

Every scheduled process, every module, one dashboard.

● General Ledger

● Accounts Payable

● Accounts Receivable

● Fixed Assets

● Projects (PPM)

● Cash Management

● Procurement

● Inventory

Stop babysitting ESS jobs

ESS Monitor deploys in days. Works with your Oracle Fusion instance. Fully managed and always up to date.
